- Simply Connect – Glass bridge lights up connection for global telecoms company in W London-Designed by Paul Vick Architects

The glass bridge that lights up at night was created as a key expression of identity for the global telecoms HQ that numbers Governments and City fintech companies on its client roster. The 15m long design is deceptively simple, with every joint, support, light fitting and even rainwater management carefully curated. The design employs different translucencies (for privacy) and texture, and the angle and landscape are formed to provide a passive approach to sun shading.

Designed to offer resilience and make the most of the existing building's fabric, the bridge and layouts reduce the number of receptions, increase useable space and forge connection between teams – social, economic and environmental sustainabilities. Paul Vick architects are Chartered RIBA architects and members of KCWCC. Paul Vick, RIBA, MSc Dev Prac is also a Fellow of Royal Society of Arts. Paul Vick architects have also been awarded BUILD's Best Commercial Architecture Firm London 2023.
